MAIN PROJECTS

Enlazo – May 2023

"Small business manager"
- Inventory management and collection in physical branches updated in online stores.
- Link: https://portfolioandres.netlify.app/

Ecommerce with React – April 2023

"E-commerce application developed with React"
- Interface design using React, Redux, Bootstrap, and CSS.
- Consumption of electronic products API to simulate an online store where users can log in, add products to the shopping cart, delete items, and checkout. The application also includes search and filtering by categories, among other functionalities.
- Link: https://ecommerceandres.netlify.app/

Pokedex - April 2023

"Pokedex application developed with React"
- Interface design using React, Redux, React Router Dom, and CSS.
- Project made with React, using protected routes and Redux.
- Link: https://pokedexandres.netlify.app/

App Weather - March 2023

"Weather application developed with React"
- Interface design using React and CSS.
- Uses the OpenWeather API to obtain weather data, and the page can get the user's precise location. The application also includes a dark mode and a loading spinner.
- Link: https://weatherandres.netlify.app/

Rick and Morty dimensional portal gun - March 2023

"Rick and Morty dimensional portal gun made with React."

- Project made using React, it consumes the Rick & Morty API to bring dimensions and characters that are listed automatically, the page shows a random location when opened, and it has a search bar to go to a specific dimension.
- Link: https://ricymsearcher.netlify.app/

Ecommerce with Vanilla JavaScript - February 2023

"E-commerce developed in JavaScript"
- Project made with Vanilla JavaScript, HTML, and CSS, featuring a shopping cart, a dark mode, and a filter to search by product categories.
- Link: https://instanth.netlify.app/
